

## Husqvarna Viking DESIGNER DIAMOND™ Gems of Wisdom

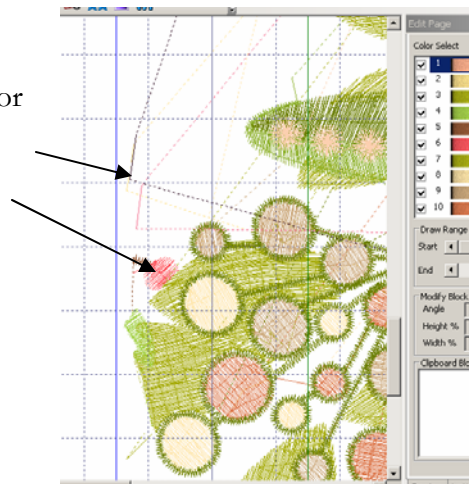

### Saving and Working with Majestic Hoop Designs in 4D Embroidery Software:

When you open a Majestic Hoop design in 4D Embroidery Software, have the Majestic Hoop chosen, before you open your design. This will maintain the split, registration marks and maintain it as two separate files.

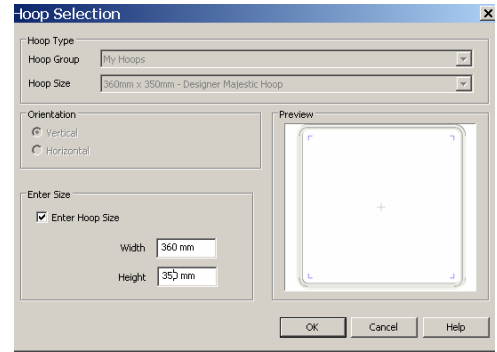

If you choose to Combine the design (which is necessary to print it) or Save it again, it will automatically split it again. This is not desirable

because what it is doing is looking at the original design that was split as one design, and splitting it again, not necessarily in the same spot. Small bits and pieces are different each time resulting in a less than desirable design.

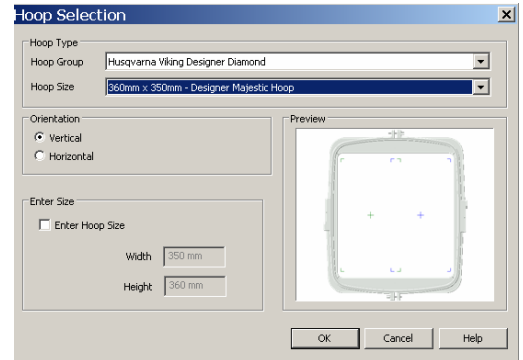

If you need to combine the design, in order to print it, go ahead, but when you close it and you are asked whether or not you want to save it, say no. This will retain our original design, with the original split, with no changes or additional splits being made.

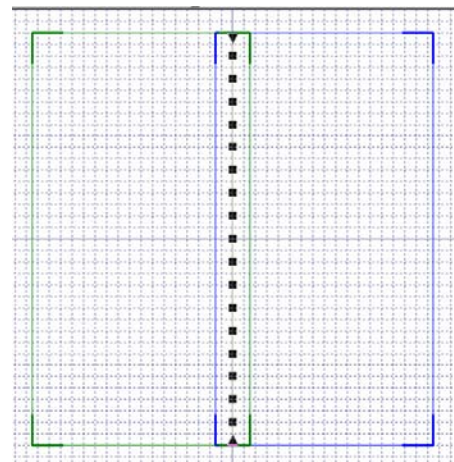

If desired, you can create your own 350 x 360 hoop that is one embroidery area of 350 x 360, not two designs split for a turnable hoop. If you are creating a design from scratch, or want to use Design Aligner to split the design yourself, create and work on the design in a 350 x 360 hoop you have created under Enter Size in the Hoop Group. Save and Copy the design.

After saving the design, open 4D Design Aligner. When “Load Design Wizard – Hoop Options” opens, select Change Hoop. Select the Majestic Hoop. Click Next. Paste the Majestic Hoop Design and click Finish.

The screen shows the split area and allows you to split the design as desired.

For more information on splitting designs for the Majestic Hoop, go to the Learning Center.
