

**NEW! Husqvarna Viking Specialty Bobbin Case #920033096**

**READY:**

Create beautiful bobbin work, also called reverse decorative stitch embroidery with the Husqvarna Viking Specialty Bobbin Case which features a large bypass slot for heavy threads and fine yarns or cords and an adjustable tension screw for specialty threads.

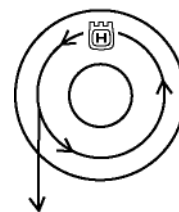

To wind heavy or specialty threads on the bobbin, place the bobbin on the bobbin winder with the Husqvarna Viking logo out, hold the specialty thread in your hand or slide it on a pencil and wind specialty thread slowly and evenly onto the bobbin. Heavier and textured specialty thread should be wound on the bobbin by hand in the opposite direction from machine winding so it feeds directly in to the bypass slot. See Illustration.

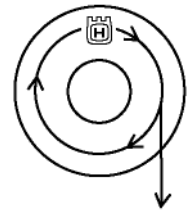

**SET:**

1. Lower the feed teeth, remove the stitch plate and replace the standard bobbin case with the specialty bobbin case. Slide stitch plate back in place and raise feed teeth.
2. Place the bobbin in the specialty bobbin case with the Husqvarna Viking logo up.
3. Bypass bobbin tension: For the most textured bobbin work, do not pull the heavy thread or yarn into the bobbin tension or the thread cutter. To bring the bobbin thread up, hold the top thread and turn the hand wheel one turn toward you. The heavy thread or yarn will drop in to the bypass slot and a loop will come to the top.
4. For less texture use thinner specialty threads and adjust the bobbin tension screw as needed so the thread pulls evenly, then place bobbin and pull specialty thread into the bobbin tension.
5. Thread the top with regular sewing thread. Use the size universal needle that is recommended for the weight of fabric you are sewing. Snap on the B or S foot.

Normal - counter clockwise

Heavy threads when bypassing the tension - clockwise

**SEW:**

Experiment on scrap fabric. Select stitches that are not densely stitched. Place the right side of the fabric down against the feed teeth. Begin with a straight stitch, length 4-6, then try zig zag, length 4-6, width 4-6. Other options are open decorative stitches such as the feather stitch. Lengthen most stitches for best results. Select slow speed and stitch at an even speed for best results. Increase top tension slightly as needed. Lightweight fabrics will need to be starched for stability.
